

# Student Task: Personal Profile & Portfolio Page

HTML & CSS Recap Assignment — Build a Single-Page Web Site

## OBJECTIVE

Create a clean, well-structured single-page website about yourself, a favorite fictional character, or a topic of interest (e.g., a hobby, movie, or favorite city). Apply foundational HTML structure and CSS rules on your own.

## 1. HTML Requirements

- **Header Section:**
  - Main title ( `<h1>` ) with your name/topic.
  - Tagline or intro statement ( `<p>` ).
- **Navigation Bar:**
  - An unordered list ( `<ul>` ) with working links ( `<a>` ) pointing to page sections via IDs (e.g., `href="#about"` ).
- **About / Bio Section:**
  - Brief descriptive paragraph.
  - An image ( `<img>` ) with proper `alt` text.
- **Skills or Interests Section:**
  - A list showcasing 3–5 items.
  - A simple table ( `<table>` ) with key details (e.g., Topic | Experience | Rating).
- **Footer:** Copyright or contact details.

## 2. CSS Requirements

- **Layout & Box Model:**
  - Custom `background-color` and clean `font-family` on `body` .
  - Adjust `padding` and `margin` to ensure clear spacing between sections.
  - Set a `max-width` and center the main page wrapper with `margin: 0 auto;` .
- **Typography & Colors:**
  - Styled headings ( `h1` , `h2` ) with custom colors.
  - Remove default link underlines ( `text-decoration: none;` ).
- **Interactivity:**
  - Add a `:hover` visual effect on links or buttons.
- **Card Containers:**
  - Wrap main sections with subtle background fills, borders, and `border-radius` .

### ★ Bonus Challenge (For Early Finishers)

- **Flexbox Header/Nav:** Display navigation links horizontally using `display: flex;` and `justify-content: space-between;` .
- **Responsive Image:** Prevent scaling overflow by applying `max-width: 100%; height: auto;` to your images.
