Lab Evaluation: Inventory Data Modification

Database Management System (DBMS) Lab — Practical Assessment Tasks

TASK 1

Write an SQL DDL query to create a database named `InventoryDB` and a table named `Inventory` with attributes for product ID, product name, category, stock quantity, and unit price.

TASK 2

Write an SQL statement to insert five sample product records into the `Inventory` table as specified in the lab manual.

TASK 3

Write an SQL query to update the `stock_quantity` to 15 and `unit_price` to 1100.00 specifically for the product with `product_id = 102`.

TASK 4

Write an SQL query to apply a 10% promotional discount to the `unit_price` of all items in the 'Electronics' category that have a `stock_quantity` greater than 10.

TASK 5

Write an SQL query to safely delete all records from the `Inventory` table where the product is out of stock (`stock_quantity = 0`) and belongs to the 'Electronics' category.

TASK 6

Write a `SELECT` query to display all columns and rows from the `Inventory` table to verify state changes before and after execution.

TASK 7

Write an SQL query to increase the `unit_price` by 50.00 for all items in the 'Accessories' category with a current price under 500.00.

TASK 8

Write an SQL query to set `stock_quantity = 0` for all products in the 'Electronics' category that have a `unit_price` greater than 20000.00.
